Frequency range [MHz]		Limit: QP [dB(μV) ¹⁾]	Limit: AV [dB(μV) ¹⁾]			
0,15 - 0,50		66 – 56 ²⁾	56 - 46 ²⁾			
0,50 - 5,0		56	46			
5,0 - 30		60	50			

¹⁾ At the transition frequency, the lower limit applies.

NOTE 1: The exclusion band for transmitters shall be considered for transmitters operating at frequencies below 30 MHz.

NOTE 2: Where the AC output port is directly connected (or via a circuit breaker) to the AC power input port of the EUT the AC power output port need not to be tested.

Above 960	500	54	3 _(Note 2)

Note 1: At frequencies below 30 MHz, measurements may be performed at a distance closer than that specified in the regulations; however, an attempt should be made to avoid making measurements in the near field. Pending the development of an appropriate measurement procedure for measurements performed below 30 MHz, when performing measurements at a closer distance than specified, the results shall be extrapolated to the specified distance by either making measurements at a minimum of two distances on at least one radial to determine the proper extrapolation factor or by using the square of an inverse linear distance extrapolation factor (40 dB/decade).

Note 2: At frequencies at or above 30 MHz, measurements may be performed at a distance other than what is specified provided: measurements are not made in the near field except where it can be shown that near field measurements are appropriate due to the characteristics of the device; and it can be demonstrated that the signal levels needed to be measured at the distance employed can be detected by the measurement equipment.

Measurements shall not be performed at a distance greater than 30 meters unless it can be further demonstrated that measurements at a distance of 30 meters or less are impractical. When performing measurements at a distance other than that specified, the results shall be extrapolated to the specified distance using an extrapolation factor of 20 dB/decade (inverse linear-distance for field strength measurements; inverse-linear-distance-squared for power density measurements).

Note:

- 1. Measured Level = Reading Level + Factor.
- 2. The test frequency range, 9kHz~30MHz, 18GHz~26GHz, both of the worst case are at least 20dB below the limits, therefore no data appear in the report.
- 3. This limit applies for using average detector, if the test result on peak is lower than average limit, then average measurement needn't be performed.
- 4. As the radiated emission was performed, so conducted emission was not tested.

Note 1: If maximum conducted (average) output power was used to demonstrate compliance as described in 9.2, then the peak power in any 100 kHz bandwidth outside of the authorized frequency band shall be attenuated by at least 30 dB relative to the maximum in-band peak PSD level in 100 kHz (i.e., 30 dBc).

Note 2: If the maximum peak conducted output power procedure was used, then the peak output power measured in any 100 kHz bandwidth outside of the authorized frequency band shall be attenuated by at least 20 dB relative to the maximum in-band peak PSD level in 100 kHz (i.e., 20 dBc).

-----	---------------------	----------	------

Standard	FCC Part 15 Subpart C Paragraph 15.203
An intentional radiator shall be o	designed to ensure that no antenna other than that furnished by the responsible party
shall be used with the device. T	he use of a permanently attached antenna or of an antenna that uses a unique
coupling to the intentional radia	tor shall be considered sufficient to comply with the provisions of this section. The
manufacturer may design the u	nit so that a broken antenna can be replaced by the user, but the use of a standard
antenna jack or electrical conne	ector is prohibited. This requirement does not apply to carrier current devices or to
devices operated under the pro	visions of §15.211, §15.213, §15.217, §15.219, or §15.221. Further, this requirement
does not apply to intentional rac	diators that must be professionally installed, such as perimeter protection systems and
some field disturbance sensors,	, or to other intentional radiators which, in accordance with §15.31(d), must be
measured at the installation site	e. However, the installer shall be responsible for ensuring that the proper antenna is
employed so that the limits in th	is part are not exceeded.
